                   (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to

                                                                                                                                      electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114/gb)AF129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XLJO-Gold (Stratagene) cells and selected for ampicillin resistance."

On Sep 14, 2001 this sequence version replaced gi:13897376.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >-
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one Mi3 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em; EMBL; Sw:,
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrl RP11-944024 is from the library RPGI-11.2 constructed by the group of Pleter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IMPORTANT: This sequence is not the entire insert of clone RP11-544024 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true left end of clone RP11-544024 is at 1 in this sequence. The true left end of clone RP4-646P11 is at 85737 in this sequence.

It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence so soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (09-JUL-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK.                                                                                                                                                                                                                                                     * NOTE: This record contains 138 individual
sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.
871. Continued to the property of the preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalla; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 144979)

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. NOTICE:

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Mo. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc ו D. et. Louis

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) SOURCE INFORMATION: The RPCI-11 human B NEIGHBORING SEQUENCE INFORMATION: pBACe3.6

Translatted amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42755) genes determine sex in birds and can be used to identify the sex of an embryo,

            The chicken CHD-W gene (AAT42754) acting alone or in conjunction wit the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-W was deduced from 2 clones isolated from a 10-day chick embryo library using a fragment of the CHD-1A gene as a probe. The CHD-W gene is located on the W chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-W nucleic acids can also be used to control the sex of progeny of a hiral control characteristic control can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a hiral can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to control the sex of progeny of a can be used to can be used to control the sex of progeny of a can be used to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Avian

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene (AAT42757), to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42758) and and the great tit CHD-W gene (AAT42759). Translated amino acid and the great tit cHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754-55) genes determine sex in birds and can be used to identify the sex of an embryo,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CHD-W;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chicken

                                                                                                                                                                                            Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (see also AAT42758) and the great tit CHD-W gene (see also AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42755) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chick CHD-1A gene fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The chicken CHD-W gene (AAT42754) acting alone or in conjunction with the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-1A was deduced from 3 clones isolated from a stage 10-12 chicken embryo cDNA library using a great tit CHD-W sequence (see also AAT42755) as probe. The CHD-1A (A = Avian) gene shows close identity to the mouse CHD-1 gene (see also AAT42756-57). It is located on an autosome or 2 chromosome. Probes based on CHD-W and CHD-1A give a W chromosome specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-1A nucleic acids can also be used to control the sex of the progeny of a bird.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Avian chromodomain-helicase-DNA binding genes determine sex in birds - used for sex determn. and to control sex of progeny

These proteins can be used for, e.g. research and nutrition, and may have cytokine and cell proliferation/differentiation, immune stimulating/suppressing, haematopoiesis regulating, tissue growth, activin/inhibin, chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand, anti-inflammatory or tumour inhibition activity.

CBFBBA01 is a cytoplasmically-orientated integral membrane protein, located in the endoplasmic reticulum and golgi membranes. CBFBBA01 polynucleotide (I), vectors containing (I) and recombinant host cells are useful for recombinant production of CBFBBA01. Both (I), CBFBBA01 and antibodies against CBFBBA01 are useful as research reagents, for screening assays and in diagnostic assays, especially for cancer, autoimmune disease, diabetes mellitus and multiple sclerosis. Antagonists and agonists of CBFBBA01 can be used to inhibit or enhance, respectively, the activity of CBFBBA01 or expression of (I). Anti-CBFBBA01 antibodies and CBFBBA01 or its fragments can be used in vaccines.

AMT11338 and other CDNA molecules encoding PDRPS were isolated using a LexA, AFT1 33-194 fusion protein i.e. AFT1 (Arabidopsis 14-3-3 1) protein residues 33-194 fused to LexA, a DNA binding protein, in an interaction trap assay. AFT1 is a transcriptional activator protein and may be used to enhance, control or modify plant gene expression, e.g. in the regulation of plant storage components (esp. naplin, legumin or phaseolin). AFT1 can also be used to modulate signal transduction events involved in plant defence responses to pathogens such as fungi, nematodes, and the plant defence responses to pathogens such as fungi, nematodes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hybridisation assay; genetic mapping; gene expression control; protein identification; signal transduction pathway; metabolic pathway; promoter; termination sequence; ss.

                         The invention relates to isolation of coding sequences and/or genes involved in tolerance to environmental stress in plants. The sequences (AAZ98305-Z98365) are useful for producing a transgenic plant having enhanced tolerance or resistance to environmental stress conditions such as anaerobic, flooding, cold, dehydration, drought, heat stress or salinity. This is useful for producing improved yield, growth, development and productivity under environmental stress conditions, and also provides growth of crops in areas where they cannot grow without the induced osmotolerance. Sequences AAZ98305-365 represent polynucleotide sequences from A. thaliana that are involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21-CCT-1999

                                           system, such as peripheral nervous injuries, peripheral neuropathy localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                   Tang
Wang

```
The invention describes an isolated human pyridoxal (pyridoxine, vitamin CC B6) kinase, (PDXK) polynucleotide. The polynucleotide is useful in CC studying the expression and function of PDXK, and in expressing PDXK CC protein for use in screening for candidate drugs to treat PDXK related CC diseases and for therapeutic purposes. A transgenic animal is useful for CC studying expression of the PDXK isogenes in vivo, for in vivo screening CC and testing of drugs targeted against PDXK protein, and for testing the CC efficacy of therapeutic agents and compounds for autoimmune polyglandular CC disease type 1. The polypeptide is useful for studying the effect of the CC variation on the biological activity of PDXK and the binding affinity of CC andidate drugs targeting PDXK for the treatment of autoimmune CC polyglandular disease type 1. Genotyping and haplotyping is useful for CC improving the efficacy and reliability of several steps in the discovery and development of drugs for treating disease associated with PDXK CC as a candidate agent for treating a specific condition or disease CC predicted to be associated with PDXK activity, and in the design of CC clinical trials of candidate drugs. This sequence (located on chromosome CC 21922.3) encodes human pyridoxal (pyridoxine, vitamin B6) kinase (PDXK) and forms the reference sequence on which the isoforms AdUll92 and CC AMUll93 are based, described in the method of the invention.

                                                                                   CC associated proteins (I) and the nucleic acids (NAS) that encode them.

CC (I) have cytostatic activity and can be used in gene therapy, antisense conhibition and in vaccines. The NAS and the lung tumour-associated proteins they encode may be used in the prevention, treatment and concers. For example, the NAS may be administered to treat diseases by rectifying mutations or delections in a patient's genome that affect the activity of the protein by expressing inactive proteins cor to supplement the patients own production of (I). Additionally, the CC NAS may be used to produce the lung-tumour associated protein, according to standard recombinant DNA methodology. Conversely, antisense NA complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar NA sequences in cassays to detect and quantitate the presence of similar NA sequences in cassays to identify modulators (agonists and antagonists) of the captesion and activity of the protein. AAF6808 and antagonists) of the concert inventor sequences which have a satigens in the production of antiboddes and in assays to identify modulators (agonists and antagonists) of the concert inventor sequences which are used in the exemplification of the concept inventor of the protein related the protein related the protein related.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   15-OCT-1999;

This is useful in the treatment of cancer, anglocardiopathy, nervous system diseases, immune diseases and phlogosis. The present sequence is the homoglutamine-rich factor 56
                                                                                                                                                                                                                                                           Homo (human) glutamine(Q)-rich factor 56 applicable in diagnosis and treatment of cancer, angiocardiopathy, nervous system diseases, immune diseases and phlogosis \,\cdot\,

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "a 104 c 124 g 138 t
